

## Amendments and additions to the GCU (march 2011)

### Annex 7

<p><b>1.- Expose the problem (with examples and, if possible, figures allowing to measure the scope of the problem)</b></p> <p>When ordering spare parts there is the delivery address stated in the Form H/H<sup>R</sup>. In the case of road transport the mentioned address can be kept. In the case of transport by rail it is necessary to indicate the station code in the wagon note, which according to the delivery address mentioned in the Form H/H<sup>R</sup> can not be determined.</p> <p>E.g. By sending spare parts to the big cities such as Mannheim, which includes approx. 20 railway stations, there can be the case that a spare part is sent to the wrong railway station.</p>	<p><b>2.- Show why and where the GCU is lacking in this respect</b></p> <p>Annex 7 GCU does not impose the obligation to precise the code of the train station.</p>
<p><b>3.- Explain why the described problem can only be solved through the GCU contract</b></p> <p>Given that the Form H/H<sup>R</sup> is included in Annex 7 GCU, this problem must be solved only through the GCU,</p>	<p><b>4.- Outline why solve the problem like it is envisaged in the proposed amendment/addition</b></p> <p>If in the Form H/H<sup>R</sup> under the delivery address there will be mentioned code of the station, there is no case to send spare parts to the wrong station.</p>
<p><b>5.- Describe how the proposed amendment or addition will help to solve the problem</b></p> <p>If in the Form H/H<sup>R</sup> under the delivery address there will be mentioned code of the station, there is no case to send spare parts to the wrong station.</p>	<p><b>6.- Evaluate the possible positive and negative impacts (operational, costs, administrative, interoperability, safety, competitiveness,...), using a scale from 1 (very low) to 5 (very high)</b></p> <p><b>Positive:</b> Guaranteed delivery to the correct railway station</p> <p><b>Be negative:</b> not known.</p>
<p><b>7.- Text proposal</b></p> <p><i>Under the delivery address add “<b>Code of station</b>”</i></p> <div style="display: flex; align-items: center; justify-content: space-around;"> <div style="text-align: center;"> <p>□□□□□□</p> </div> <div style="text-align: center;">  <p>Form H<sup>R</sup></p> </div> </div>
